DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 and 33-38 are rejected under 35 U.S.C. 102(b) as being anticipated by USPN 6,245,095 B1 Dobak III et al.

Dobak discloses the same invention being a medical device comprising an elongated core member (42), wherein at least a portion of the core member has a solid cross section perpendicular to the longitudinal axis of the device, a polymer paralyene jacket (20) free of a coil having a textured surface comprising a helical groove with rounded edges positioned proximal of the distal tip (shown in figure 1) and a heparin coating disposed over the polymer jacket (10:49-64).

Response to Arguments

Applicant's arguments filed 2/28/07 have been fully considered but they are not persuasive. The applicant argues that the amended claims that recite "at least a portion of the core member has a solid cross-section perpendicular to the longitudinal axis of the device" overcomes the Dobak rejection. However the new claim language is extremely broad and is preceded by the phrase "wherein <u>at least a portion of</u> the core member has a". This phrase requires that only some of the core member is solid. It is

Application/Control Number: 10/699,312

Art Unit: 3738

inherent that every cylindrical tube has a solid portion perpendicular to its longitudinal axis. Otherwise the tube would not be a cylinder. The walls of the core are made of a solid material therefore Dobak clearly discloses an elongated member that has a portion with a solid cross-section. Whether the cross-section is taken along the length of the elongated member at its outer edge, on an angle at its end, or just through a single side of the elongated member there is inherently a solid cross-sectional portion.

The applicant also argues that Dobak fails to teach an additional coating besides the polymer paralyene, but this is not convincing because Dobak gives various reasons for additional coatings including Heparin for inhibiting blood clot formation (10:49-64).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher D. Prone whose telephone number is (571) 272-6085. The examiner can normally be reached on Monday Through Fri 8:30 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Corrine McDermott can be reached on (571) 272-4754. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
